

TITANIUM

Products by *Phiten*[®]

If you are living with **pain**, or just want to give yourself an **athletic edge**, you owe it to yourself to try these safe and reasonably-priced products.

Discs & Tapes • Titanium Lotion • Necklaces • Bracelets • Bands • T-shirts
Compression Shorts • Socks • Light-weight Belts • Knee, Ankle & Elbow Sleeves

What do these products do?

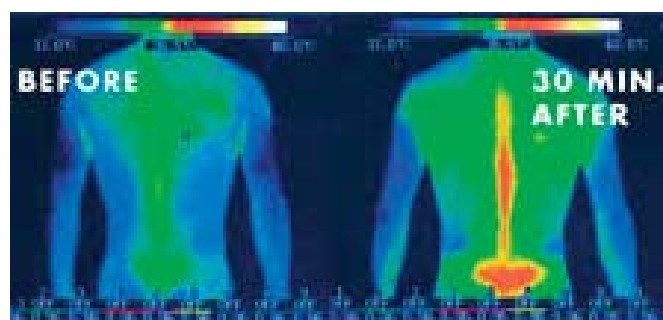

Titanium products help relieve joint and muscle pain, improve blood circulation, reduce swelling, keep muscles conditioned and flexible, alleviate stress and prevent fatigue.

How do these products work?

When the titanium products are worn or applied to the body there is a localized increase in body muscle temperature which helps relax the muscles and stimulates the flow of blood. This means that lactic acid in the muscles (the chemical that causes the feeling of cramp or pain) can be washed out of the area more quickly and broken down. The heat compresses the free nerve endings in the muscles and slows down the transmission of pain from the muscle to the brain. Wearing Phiten titanium products may actually help prevent injuries and enhance your performance in sports in addition to providing relief from pain.

Visible proof of effects

In this experiment, photos showing body heat were taken immediately before and thirty minutes after Liquid Titanium was applied to the back.

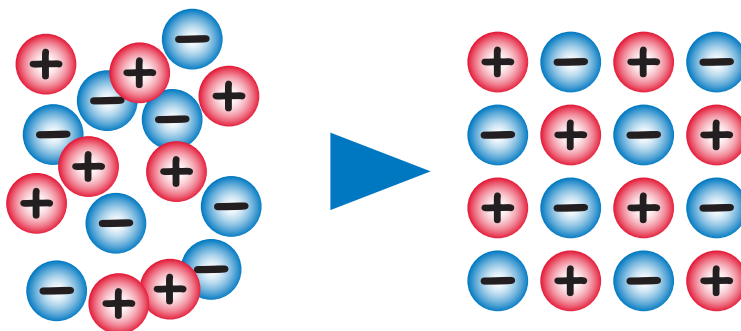

The Result:

Back muscles relaxed, blood circulation improved and body temperature rose.

How can titanium fight pain?

Specially processed Titanium emits energy that is effective in controlling the flow of bioelectric current. When this current is stabilized, the muscles relax and blood circulation increases, allowing for easier movement and pain relief.

All Phiten products help relieve pain in muscles and joints by improving the alignment of ions, especially at the body's crucial motor points. This enables the body to use less energy for every action, slowing fatigue.

What's up with those necklaces the major league ballplayers are wearing?

They are made with titanium, a safe and hypo-allergenic metal used widely in the fields of medicine and sports in products varying from the heads of golf clubs to replacement hip joints. This light metal has the ability to regulate imbalances in the body's natural electrical current that might have been disrupted by toxins, stress or injury. Phiten, a company out of Japan, has created a unique process which makes the titanium soluble in water. This process allows them to manufacture products ranging from titanium lotions, titanium tapes, and even clothing where the titanium is permanently bound to the fabric and not removable by washing.
